

How to compose key references

Luiz Cláudio Vieira <lcvieira@quantica.com.br>

Please, check for the available characters for **KeySet 4** TTF by using any TTF viewer (e.g. Windows charmap.exe).

1) Creating an arbitrary key lettering - **ENTER** (or **ENTER↑**):

- ❑ start with a parenthesis (
- ❑ key in the arbitrary name (ENTER
- ❑ add existing symbolic characters (*) (ENTERâ
- ❑ add a closing parenthesis to finish (ENTERâ)
- ❑ select the text *and* both parentheses **(ENTERâ)**
- ❑ choose Key Set 4 as the font type **ENTER↑**

(*) â is the 226₁₀ ASCII character, that corresponds to ↑

2) Some specific symbols do not need to be surrounded by parentheses because they represent complete keys, like:

f **g** **h** **2nd** **↶** **↷** **↵** **↶** **x²** **√x** **∫** **∫_y^x**

Colors may be set by using the native resources of the text processor.
